

### 1 GEORGE

Introducing the KLG Program: Consolidating Sustainability Goals and Milestones

Our company's KLG program is designed to bring together various sustainability objectives and achievements. The program is guided by six core values: Green, Economy, Organization, Respect, Growth, and Ethics. It encompasses several key aspects of our business, including employees, customers, suppliers, environment, community & education, certificates, and code of conduct.

### 2 GOALS

A sustainable future: Our Plan for Zero Logistics Emissions.

Our milestones, goals and targets are the embodiment of our vision. Reducing carbon emissions is a critical aspect of achieving a sustainable future. Our efforts are not only for our own benefit, but for the benefit of current and future generations.

### 3 BIOFUEL

Using Biofuel will help us achieve our CO2 reduction targets in transportation, and we aim to introduce the Book & Claim product for our customers in Q1 of 2024.

We will continue to explore innovative alternatives to biofuels to further reduce our carbon footprint.

### 4 INTEGRATION

Promoting sustainability within our organization  
As we strive for a better future, it is critical that we prioritize sustainable projects within our company. But it is equally important that we do not forget the foundation of our organization - our employees. We have implemented sustainability at all levels of our business and aligned it with our mission for high-quality, employees, and processes. This ensures that we are working toward a better future for everyone.

### 5 REFLECT

We take responsibility; our commitment to society, the economy and the environment.

Our company recognizes the impact we have on the world around us, whether socially, economically or environmentally. To achieve a more sustainable future, we have set goals to guide us toward this vision. As a team, we are committed to creating a better world for tomorrow, and we are constantly evolving and adapting our processes to reflect this proactive attitude.

One of the most important values we embrace in our operations is the concept of teamwork. We believe that by working together on various initiatives, actions and projects, we can create a better future for everyone.

# 6 VISION

Our vision reads as follows;

“On the road to zero emissions within logistics”

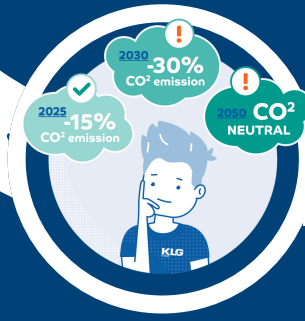

With our goal:

“By 2050, we will be carbon neutral\*”

The objectives below contribute to the achievement of our corporate goal:

- Reduction of CO<sub>2</sub> emissions from our trucks: 15% by 2025 (already achieved!)
- Reduction of CO<sub>2</sub> emissions from our trucks: 30% by 2030
- Commitment to CO<sub>2</sub> neutral transport by 2050

\*) with this sustainability vision we are in line with the guidelines of the Paris Agreement 2015 & European Green Deal (shift from road to rail and water, modal shift).

## INTERMODAL

Efficient and sustainable.

Looking for efficient transport solutions? More sustainable? More weight per load? Without driving restrictions? Without delays on the road? With less CO<sub>2</sub> emissions? Then consider our intermodal solutions.

### Rail transport between Europe and China.

A sustainable and innovative transport solution faster than sea freight and more cost effective than airfreight. From rail transport to trucking and from customs to warehousing and distribution in both Europe and China. The consignments are shipped in both normal and temperature controlled 45' containers.

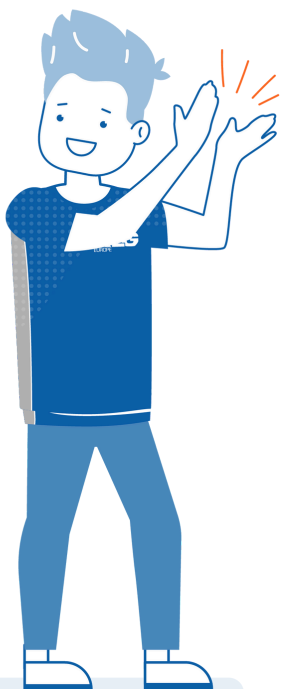

This makes it possible to transport goods by container which cannot handle the possible extreme temperature differences en-route.

During the journey the containers can be monitored by the customer 24/7, this includes the temperature in the container during transportation.

Throughout the journey we are in direct contact with our partners. There are different routes, terminals and options.

### Intermodal

In addition to daily departures to and from European destinations by road, we offer our customers the possibility to send shipments via our intermodal service by road, rail and water. We offer an intermodal solution to almost every European destination. A.o. to UK, Ireland, the Scandinavian countries, Italy, Spain, Switzerland, Austria, Poland, Czech Republic, Hungary, Greece, Turkey and Romania.
